HFCL, i2e1 team up to provide PM-WANI WiFi in Karnataka's Baidebettu village

The outdoor WiFi network will use HFCL IO's TIP OpenWiFi-based Access Points, Point-to-Point radios, Solar Power over Ethernet (PoE) devices, and other network equipment while WiFi network authentication and regulatory monitoring will be powered by i2e1 core solutions.

HFCL's second PM-WANI model to be set up in Udupi village

Our Bureau | Mangaluru | Updated on June 24, 2021

The network will offer Wi-Fi Internet with bandwidth of up to 500 Mbps in all common areas of the village

HFCL Ltd, in collaboration with the Telecom Infra Project (TIP) and i2e1, will set up PM-WANI-powered (Wi-Fi Access Network Interface) connectivity at Baidebettu village in Udupi district of Karnataka.

A press statement said that PM-WANI network will provide high speed Wi-Fi internet to over 9,000 residents of the village located in Brahmavara taluk of Udupi district.

The network will offer Wi-Fi Internet with bandwidth of up to 500 Mbps in all common areas of the village that is spread across a radius of 6 km. Due to its remote location under high rainfall zone and absence of internet infrastructure, Baidebettu presently does not

HFCL to set up 2nd model PM-WANI Village in Karnataka

June 24, 2021 • technuter • 0 Comments

Leading Indian Wi-Fi brand and one of the first TIP OpenWiFi compliant solutions provider, IO by HFCL, in collaboration with Telecom Infra Project (TIP), announced setting up their 2nd PM-WANI powered connectivity for Baidebettu village in Karnataka. This PM-WANI network will provide high speed Wi-Fi Internet to over 9,000 residents of the otherwise poorly connected village located in Brahmavara Taluk, Udupi district.

The project entails setting up a robust outdoor Wi-Fi network for providing broadband Internet connectivity to the entire village population. The outdoor network will use **HFCL IO's TIP OpenWiFi-based Access Points**, Point-to-Point radios, Solar Power over Ethernet (PoE) devices and other network equipment. The Wi-Fi network authentication and regulatory monitoring will be powered by i2e1 core solutions who will also act as the Public Data Office Aggregator (PDOA) under the PM-WANI model. The network is expected to go live by July 31, 2021.

The integrated package being deployed is indigenously developed and built in India for high performance, is fully secure and designed to withstand and perform under harsh weather conditions including heavy rainfall that the village receives throughout the year.

The network will offer Wi-Fi Internet with bandwidth of up to 500 Mbps in all common areas of the village that is spread across a radius of 6 kilometers. Due to its remote location under high rainfall zone, and absence of IT and Internet infrastructure, Baidebettu presently does not have any reliable connectivity. As a result, villagers earlier would travel many kilometers to nearby towns to get digitally connected. Recent Covid-19 restrictions further impacted this travel and have severely affected their lives.

With this deployment, the entire village of 9,000 population will come under the broadband fold, which is expected to significantly improve their quality of life by providing them access to digital services such as healthcare, education, banking, retail, entertainment, government digital services and many more.

LEARN MORE

HFCL Ltd, in collaboration with the Telecom Infra Project (TIP) and i2e1, will set up PM-WANI-powered (Wi-Fi Access Network Interface) connectivity at Baidebettu village in Udupi district of Karnataka.

A press assertion mentioned that PM-WANI community will present excessive pace Wi-Fi web to over 9,000 residents of the village situated in Brahmavara taluk of Udupi district.

The community will supply Wi-Fi Internet with bandwidth of up to 500 Mbps in all widespread areas of the village that's unfold throughout a radius of 6 km. Due to its distant location beneath excessive rainfall zone and absence of web infrastructure, Baidebettu presently doesn't have any dependable connectivity, it mentioned.

The Wi-Fi community authentication and regulatory monitoring will be powered by i2e1 core options which may even act as the general public information workplace aggregator (PDOA) beneath the PM-WANI model. The community is anticipated to go reside by July 31, it mentioned.
