HFCL Limited, the leading high-tech enterprise and integrated next-gen communication product and solution provider speaks to Business Today TV's Chetan Bhutani on new products and 5G

HFCL launches World's First Open source Wi-Fi 7 Access Points at India Mobile Congress

Sunvilla News: Ahmedabad

HFCL Limited, the leading high-tech enterprise and integrated next-gen communication product and solution provider in collaboration with Qualcomm Technologies, Inc. launches world's first Open source Wi-Fi 7 Access Points under its IO product line at India Mobile Congress, Pragati Maidan, New Delhi on 01 October 2022. HFCL becomes the first OEM to launch Open source Wi-Fi 7 Access Points, based on the IEEE 802.11be - a revolutionary Wi-Fi technology that is designed to deliver Extremely High Throughput (EHT), higher spectral efficiency, better interference mitigation, and Real Time Applications (RTA)

support. Wi-Fi 7 uses faster connections with 320MHz and 4kQAM, multiple connections with Multi Link operation and Adaptive Connections for adaptive interference puncturing to deliver all enhanced user's experience while offering better power efficiency. Compared to all improvements in previous Wi-Fi standards, Wi-Fi 7 promises a huge technological leap, offering an immersive experience to its users, ushering the world towards a digitally stronger path. HFCL's Wi-Fi 7 APs will support peak data rates of over 10 Gbps and will offer latency under 2 ms compared to 5 Gbps and 10 ms of current Wi-Fi 6 products. Backed by strong R&D focus, HFCL's Wi-Fi 7 product line will

enable tech providers such as telecom operators, Internet service providers, system integrators, and network administrators to offer mission critical and real time application services and deliver better user experience than ever before. The new Wi-Fi 7 product portfolio has a wide range of dual band and tri-band indoor and outdoor variants. All the Wi-Fi 7 variants will be shipped with open source software making these the first Wi-Fi 7 Access points in the industry to support Open standards. Open standards promote disaggregated Wi-Fi system offered as free open-source software with an aim to offer advanced global connectivity ensuring interoperability in multi-vendor scenario.

COMMENT (0)

One of the few Indian vendors to successfully transition from the domestic to the international markets is Himachal Futuristic Communications Limited (HFCL). While the company started its journey as an optical fiber manufacturer, it has recently made waves because of its new product development for growing markets.

"A key driver of the transition was that we wanted to grow our revenue by going beyond the Indian market," said Mahendra Nahata, managing director of HFCL, speaking to Light Reading. "To do so we had to develop our own design capabilities and procure new machinery, as every market has its own specific requirement for optical cable."

New product growth

The market expansion has helped the company grow revenues to 43.3 billion rupees (US\$527 million) in 2021-22 from INR30.9 billion (\$376 million) in 2017-18. And HFCL is investing heavily in new product development, working with partners outside of India to complement its booming fiber business.

Headline : India's HFCL claims world's first Wi-Fi 7 AP

Domain : The Register

Date : October 03, 2022

Journalist:

https://www.theregister.com/2022/10/04/india_xiaomi_qualcomm/

India's HFCL claims world's first Wi-Fi 7 AP

Indian tech manufacturer HFCL has launched what it claims is the first Wi-Fi 7 access point – quite a feat given that Wi-Fi 7 (aka 802.11be) is thought to be on track for ratification in 2024 and no commercial client devices are currently available.

The Register therefore asked HFCL whether the device is practical. We were told that as it is backwards compatible with Wi-Fi 6 and 5, buyers might wish to consider the device for current Wi-Fi networks and then add Wi-Fi 7 once client devices become available.

The company added that it has conducted interoperability tests with earlier versions of Wi-Fi but is yet to do so for Wi-Fi 7.

The machines use Qualcomm Networking Pro silicon.

HFCL has not set a price for its access points but will start taking orders in December and expects machines to ship in April 2023.

HFCL Gains Most In A Month

Shares of HFCL rose nearly 5.3%, most in a month. Trading volume is nearly twice the 30-day average. The rise comes after the company launched 5G Lab-as-a-Service to accelerate rollout of 5G solutions and services. The 5G LaaS provides an automated test environment for private sector, academia and government to work together on product innovations.

The 5G Lab will enable technology providers such as telecom operators, network equipment providers, system integrators, IoT device makers to analyse, integrate and validate products and solutions in real 5G network environment.

The company also launched world's first open source WiFi 7 access points products in addition to the existing 5 access points and 4 access points range of products. HFCL had collaborated with Qualcomm Technology to develop the 7 access points products. The new range of products aims to serve telecom operators, internet service providers, system integrators, network administrator among others.

Home-grown HFCL Limited, a telecom equipment manufacturer and technology provider, has launched 5G Macro radio units today at the India Mobile Congress 2022. The first product in HFCL's 5G family, the 5G 8T8R macro radio units (RU) has been designed and developed completely by the company's indigenous R&D team to address India and global markets. It is a next-generation RU that has a compact form factor. And HFCL claims that this new RU provides energy efficiency, supports digital beamforming and zero-touch provisioning and will be a key component in rolling out 5G networks.

HFCL partners Qualcomm to launch open source Wi-Fi 7 products under its IO product line

October 2022 | Products Release

Himachal Futuristic Communications Limited (HFCL), in collaboration with Qualcomm Technologies, has launched world's first open source Wi-Fi 7 access points under its IO product line at India Mobile Congress (IMC), Pragati Maidan, New Delhi.

HFCL becomes the first original equipment manufacturer (OEM) to launch open source Wi-Fi 7 access points, based on the IEEE 802.11be – a revolutionary Wi-Fi technology that is designed to deliver extremely high throughput (EHT), higher spectral efficiency, better interference mitigation, and real time applications (RTA) support. Wi-Fi 7 uses faster connections with 320MHz and 4kQAM, multiple connections with multi link operation and adaptive connections for adaptive interference puncturing to deliver all enhanced user's experience while offering better power efficiency. Compared to all improvements in previous Wi-Fi standards, Wi-Fi 7 promises a huge technological leap, offering an immersive experience to its users, ushering the world towards a digitally stronger path. HFCL's Wi-Fi 7 APs will support peak data rates of over 10Gbps and will offer latency under 2ms compared to 5Gbps and 10ms of current Wi-Fi 6 products.

Backed by strong research and development (R&D) focus, HFCL's Wi-Fi 7 product line will enable tech providers such as telecom operators, Internet service providers, system integrators, and network administrators to offer mission critical and real time application services and deliver better user experience than ever before. The new Wi-Fi 7 product portfolio has a wide range of dual band and tri-band indoor and outdoor variants.

All the Wi-Fi 7 variants will be shipped with open source software making these the first Wi-Fi 7 Access points in the industry to support Open standards. Open standards promote disaggregated Wi-Fi system offered as free open-source software with an aim to offer advanced global connectivity ensuring interoperability in multi-vendor scenario.

HFCL launches open source Wi-Fi 7 APs at India Mobile Congress

NEWS | WIRELESS | GLOBAL | 5 OCT | [BOOKMARK](#)

Indian company HFCL has with Qualcomm Technologies launched what it says are the first opensource Wi-Fi 7 APs under its IO product line. The introduction took place during the India Mobile Congress in New Delhi on 1 October.

HFCL said the opensource Wi-Fi 7 APs are based on the IEEE 802.11be for Extremely High Throughput (EHT), higher spectral efficiency, better interference mitigation, and Real Time Applications (RTA) support. Wi-Fi 7 uses faster connections with 320 MHz and 4kQAM, multiple connections with Multi Link operation and Adaptive Connections for adaptive interference puncturing while offering better power efficiency. HFCL's Wi-Fi 7 APs will support peak data rates of over 10 Gbps and offer latency under 2 ms. This compared to 5 Gbps and 10 ms with existing Wi-fi 6 products.

HFCL launches World's First Open source Wi-Fi 7 Access Points at India Mobile Congress

HFCL partners with Qualcomm to launch world's first Open source Wi-Fi 7 products under its IO product line

New Delhi, 01 October, 2022: HFCL Limited, the leading high-tech enterprise and integrated next-gen communication product and solution provider **in collaboration with Qualcomm Technologies, Inc. launches world's first Open source Wi-Fi 7 Access Points under its IO product line** at India Mobile Congress, Pragati Maidan, New Delhi on 01 October 2022.

HFCL becomes the first OEM to launch Open source Wi-Fi 7 Access Points, based on the IEEE 802.11be – a revolutionary Wi-Fi technology that is designed to deliver Extremely High Throughput (EHT), higher spectral efficiency, better interference mitigation, and Real Time Applications (RTA) support. Wi-Fi 7 uses faster connections with 320MHz and 4kQAM, Multiple connections with Multi Link operation and Adaptive Connections for adaptive interference puncturing to deliver all enhanced user's experience while offering better power efficiency. Compared to all improvements in previous Wi-Fi standards, Wi-Fi 7 promises a huge technological leap, offering an immersive experience to its users, ushering the world towards a digitally stronger path. HFCL's Wi-Fi 7 APs will support peak data rates of over 10 Gbps and will offer latency under 2 ms compared to 5 Gbps and 10 ms of current Wi-Fi 6 products.

Backed by strong R&D focus, HFCL's Wi-Fi 7 product line will enable tech providers such as telecom operators, Internet service providers, system integrators, and network administrators to offer mission critical and real time application services and deliver better user experience than ever before. The new Wi-Fi 7 product portfolio has a wide range of dual band and tri-band Indoor and Outdoor variants.

All the Wi-Fi 7 variants will be shipped with open source software making these the first Wi-Fi 7 Access points in the industry to support Open standards. Open standards promote disaggregated Wi-Fi system offered as free open-source software with an aim to offer advanced global connectivity ensuring interoperability in multi-vendor scenario.

Speaking about the launch of this revolutionary product line, Mr. Mahendra Nahata, MD, HFCL said "We are immensely proud to be the first Indian company to launch Wi-Fi 7 product line in market and the first in the world to offer Open source Wi-Fi 7 portfolio. Our Wi-Fi 7 portfolio is based on the latest Wi-Fi 7 Qualcomm® Networking Pro Series Platforms and offers better features than any commercial products available in market today. We are really thankful to Qualcomm Technologies teams for working closely with us and supporting us to make this possible. Ahead of the 5G revolution in India and globally, our Wi-Fi 7 launch is a revolutionary move helping us deliver an immersive experience to our customers globally and putting India in the forefront of global technology leadership."

Nahata added, "Launch of this product line will have several industrial applications especially like the Internet of Things (IoT) and IIoT applications, supporting advancements in Cloud/Edge Computing, Cloud gaming, and other xR-based applications. The very low latency and extremely high bandwidth have many use cases in the medical field as well, especially bringing healthcare facilities to remote locations. It is set to bring us a step closer to the Metaverse and will mitigate network congestion by delivering better connectivity experiences in high density areas and areas with numerous overlapping networks. Our investment in R&D and focus on continuous innovation has enabled us to roll out this futuristic product for users, across the globe. This also aligns with our strategy to

HFCL Limited (HFCL), has announced the launch of 5G Lab-as-a-Service to accelerate rollout of 5G solutions and services.

Telecom operators are adopting multi-vendor networks based on cloud native technologies for faster and cost-effective rollout of 5G services and for improved user experience. There is also a need to support multiple frequency bands (sub-6 GHz, millimeter wave) and various deployment scenarios to realize diverse 5G use cases for Consumer, Enterprise and Industry Verticals.

HFCL's 5G Lab-as-a-Service provides an automated test environment for the private sector, academia and government to work together on product innovations from concept to reality. The 5G Lab provides a sandbox for rapid prototyping of 5G use cases addressing the needs of various industry segments that include manufacturing, transportation, healthcare and retail. The 5G Lab will help to create pre-integrated and pre-validated 5G solutions for

Key Stocks As Nifty Opens Lower: Suzlon Energy, Coal India, Mcleod Russel & More

Investing.com • Stock Market News • 2022-10-03 04:36

Credit: © Reuters.

By Malvika Gurung

Investing.com -- The domestic market opened the new week lower, tracking weak cues from Asian markets, while oil prices surged almost 3.5% on Monday following reports of the OPEC+ to consider supply cuts at an upcoming meeting in the week after plummeting 11.2% in September.

At 9:37 am, [Nifty50](#) traded 0.62% lower and [Sensex](#) declined 0.7% or 394 points. [Nifty Bank](#) tanked 0.82%.

Here are some stocks in focus on Monday.

Suzlon Energy (NS:SUZL): The renewable energy company's founder, chairman and MD Tulsi Tanti passed away on Saturday evening due to cardiac arrest. He was known as India's 'wind man'.

Coal India (NS:COAL): The Maharatna PSU's output surged 19.7% YoY in H1 FY23, producing 299 million tonnes, already achieving 43% of the financial year's target of 700 MT production. Its coal off-take in the Apr-Sept 2022 period exceeded the target, depicting a 101.7% satisfaction.

APL Apollo Tubes (NS:APLA): The structural steel tubes manufacturer's quarterly sales volume surged 41% YoY to 6.02 lakh tonnes in Q2, marking its highest quarterly sales. In H1FY23, the figure jumped 28% YoY to 10.25 lakh tonnes.

HFCL launches World's First Open source Wi-Fi 7 Access Points at India Mobile Congress

Press Release

HFCL partners with Qualcomm to launch world's first Open source Wi-Fi 7 products under its IO product line

India, 01 October, 2022: HFCL Limited, the leading high-tech enterprise and integrated next-gen communication product and solution provider in collaboration with Qualcomm Technologies, Inc. launches world's first Open source Wi-Fi 7 Access Points under its IO product line at India Mobile Congress, Pragati Maidan, New Delhi on 01 October 2022.

HFCL

HFCL becomes the first OEM to launch Open source Wi-Fi 7 Access Points, based on the IEEE 802.11be - a revolutionary Wi-Fi technology that is designed to deliver Extremely High Throughput (EHT), higher spectral efficiency, better interference mitigation, and Real Time Applications (RTA) support. Wi-Fi 7 uses faster connections with 320MHz and 4kQAM, multiple connections with Multi Link operation and Adaptive Connections for adaptive interference puncturing to deliver all enhanced user's experience while offering better power efficiency. Compared to all improvements in previous Wi-Fi standards, Wi-Fi 7 promises a huge technological leap, offering an immersive experience to its users, ushering the world towards a digitally stronger path. HFCL's Wi-Fi 7 APs will support peak data rates of over 10 Gbps and will offer latency under 2 ms compared to 5 Gbps and 10 ms of current Wi-Fi 6 products.

Backed by strong R&D focus, HFCL's Wi-Fi 7 product line will enable tech providers such as telecom operators, Internet service providers, system integrators, and network administrators to offer mission critical and real time application services and deliver better user experience than ever before. The new Wi-Fi 7 product portfolio has a wide range of dual band and tri-band indoor and outdoor variants.

All the Wi-Fi 7 variants will be shipped with open source software making these the first Wi-Fi 7 Access points in the industry to support Open standards. Open standards promote disaggregated Wi-Fi system offered as free open-source software with an aim to offer advanced global connectivity ensuring interoperability in multi-vendor scenario.

Speaking about the launch of this revolutionary product line, Mr. Mahendra Nahata, MD, HFCL said, "We are

HFCL partners with Qualcomm to launch world's first Open source Wi-Fi 7 products under its IO product line

HFCL Limited, the leading high-tech enterprise and integrated next-gen communication product and solution provider in collaboration with Qualcomm Technologies, Inc. launches world's first Open source Wi-Fi 7 Access Points under its IO product line at India Mobile Congress, Pragati Maidan, New Delhi on 01 October 2022.

HFCL becomes the first OEM to launch Open source Wi-Fi 7 Access Points, based on the IEEE 802.11be – a revolutionary Wi-Fi technology that is designed to deliver Extremely High Throughput (EHT), higher spectral efficiency, better interference mitigation, and Real Time Applications (RTA) support. Wi-Fi 7 uses faster connections with 320MHz and 4kQAM, multiple connections with Multi Link operation and Adaptive Connections for adaptive interference puncturing to deliver all enhanced user's experience while offering better power efficiency. Compared to all improvements in previous Wi-Fi standards, Wi-Fi 7 promises a huge technological leap, offering an immersive experience to its users, ushering the world towards a digitally stronger path. HFCL's Wi-Fi 7 APs will support peak data rates of over 10 Gbps and will offer latency under 2 ms compared to 5 Gbps and 10 ms of current Wi-Fi 6 products.

Backed by strong R&D focus, HFCL's Wi-Fi 7 product line will enable tech providers such as telecom operators, Internet service providers, system integrators, and network administrators to offer mission critical and real time

HFCL partners with Qualcomm to launch world's first Open source Wi-Fi 7 products under its IO product line

NEW DELHI, Oct. 4, 2022 - HFCL Limited, the leading high-tech enterprise and integrated next-gen communication product and solution provider in collaboration with Qualcomm Technologies, Inc. launches world's first Open source Wi-Fi 7 Access Points under its IO product line at India Mobile Congress, Pragati Maidan, New Delhi on 01 October 2022.

HFCL becomes the first OEM to launch Open source Wi-Fi 7 Access Points, based on the IEEE 802.11be - a revolutionary Wi-Fi technology that is designed to deliver Extremely High Throughput (EHT), higher spectral efficiency, better interference mitigation, and Real Time Applications (RTA) support. Wi-Fi 7 uses faster connections with 320MHz and 4kQAM, multiple connections with Multi Link operation and Adaptive Connections for adaptive interference puncturing to deliver all enhanced user's experience while offering better power efficiency. Compared to all improvements in previous Wi-Fi standards, Wi-Fi 7 promises a huge technological leap, offering an immersive experience to its users, ushering the world towards a digitally stronger path. HFCL's Wi-Fi 7 APs will support peak data rates of over 10 Gbps and will offer latency under 2 ms compared to 5 Gbps and 10 ms of current Wi-Fi 6 products.

Backed by strong R&D focus, HFCL's Wi-Fi 7 product line will enable tech providers such as telecom operators, Internet service providers, system integrators, and network administrators to offer mission critical and real time application services and deliver better user experience than ever before. The new Wi-Fi 7 product portfolio has a wide range of dual band and tri-band indoor and outdoor variants.

All the Wi-Fi 7 variants will be shipped with open source software making these the first Wi-Fi 7 Access points in the industry to support Open standards. Open standards promote disaggregated Wi-Fi system offered as free open-source software with an aim to offer advanced global connectivity ensuring interoperability in multi-vendor scenario.

Speaking about the launch of this revolutionary product line, Mr. Mahendra Nahata, MD, HFCL said, "We are immensely proud to be the first Indian company to launch Wi-Fi 7 product line in market and the first in the world to offer an Open source Wi-Fi 7 portfolio. Our Wi-Fi 7 portfolio is based on the latest Wi-Fi 7 Qualcomm® Networking Pro Series Platforms and offers better features than any commercial products available in market today. We are really thankful to the Qualcomm Technologies teams for working closely with us and supporting us to make this possible. Ahead of the 5G revolution in India and globally, our Wi-Fi 7 launch is a revolutionary move helping us deliver an immersive experience to our customers globally and putting India in the forefront of global technology leadership."

Mr. Nahata further added, "Launch of this product line will have several industrial applications especially like the Internet of Things (IoT) and IIoT applications, supporting advancements in Cloud/Edge Computing, Cloud gaming, and other xR-based applications. The very low latency and extremely high bandwidth have many use cases in the medical field as well, especially bringing healthcare facilities to remote locations. It is set to bring us a step closer to the Metaverse and will mitigate network congestion by delivering better connectivity experiences in high density areas and areas with numerous overlapping networks. Our investment in R&D and focus on continuous innovation has enabled us to roll out this futuristic product for users, across the globe. This also aligns with our strategy to roll out new products, reach new customers, and tap new geographies in the coming years."

The launch of Wi-Fi 7 will primarily complement the new 5G rollout in the country especially for complementing indoor coverage. Further, the technology with its higher throughput, reliable network performance, and lower latency will facilitate the development of various applications. For enterprises, Wi-Fi 7 technology will benefit the Internet of Things (IoT) and IIoT applications such as surveillance, remote control industrial automation, AV/VR/XR, and other video-based applications. It will also increase the number of remote offices, real-time collaborations, and online video conferencing, with many advancements in Cloud/Edge Computing, and Cloud gaming.

Commenting on this, Mr. Rajen Vagadia, Vice President, Qualcomm India Private Limited and President of Qualcomm India & SAARC said
