## HFCL launches revolutionary Intermittently Bonded Ribbon (IBR) fibre cables

London, Sep 20 (UNI) HFCL Limited (HFCL), a leading technology enterprise and integrated next-gen communications product and solution provider, on Wednesday announced the launch of its revolutionary Intermittently Bonded Ribbon (IBR) Cables in the United Kingdom (UK).

As a leading supplier in the UK market, this strategic move is in line with HFCL's global

## HFCL launches revolutionary Intermittently Bonded Ribbon (IBR) fibre cables to supercharge UK's fibre build plans

**Sunvilla News : Ahmedabad**

HFCL Limited (HFCL), a leading technology enterprise and integrated next-gen communications product and solution provider, today announced the launch of its revolutionary Intermittently Bonded Ribbon (IBR) Cables in the United Kingdom (UK). As a leading supplier in the UK market, this strategic move is in line with HFCL's global expansion plans and aims to further tap into UK's urban and rural markets, accelerate 5G and FTTP adoption, and meet the growing bandwidth demands. The basis of the new cables is individual Intermittently Bonded Ribbons, each made up of 12 optical fibres, which are bonded together at specific intervals along their lengths.

Unlike traditional flat ribbons, flexible IBRs can bend and conform to the space available inside a cable. Groups of IBRs can, therefore, be bundled together into cables that provide twice the fibre packing density of traditional cables in the same volume. IBR cables enable installation of higher fibre counts in small diameter ducts, especially useful in congested areas with very limited space. One of the significant features of the new cable family is the high productivity mass fusion splicing that enables both faster installation and quick restoration in case of an accidental outage. In the UK, both urban and rural communities still face inadequate broadband access despite rapid expansion over the last few years.

London : HFCL Limited (HFCL), a leading technology enterprise and integrated next-gen communications product and solution provider, today announced the launch of its revolutionary Intermittently Bonded Ribbon (IBR) Cables in the United Kingdom (UK). As a leading supplier in the UK market, this strategic move is in line with HFCL's global expansion plans and aims to further tap into UK's urban and rural

markets, accelerate 5G and FTTP adoption, and meet the growing bandwidth demands. The basis of the new cables is individual Intermittently Bonded Ribbons, each made up of 12 optical fibres, which are bonded together at specific intervals along their lengths. Unlike traditional flat ribbons, flexible IBRs can bend and conform to the space available inside a cable. Groups of IBRs can, therefore, be bundled

together into cables that provide twice the fibre packing density of traditional cables in the same volume. IBR cables enable installation of higher fibre counts in small diameter ducts, especially useful in congested areas with very limited space. One of the significant features of the new cable family is the high productivity mass fusion splicing that enables both faster installation and quick restoration in case of an accident

outage. In the UK, both urban and rural communities still face inadequate broadband access despite rapid expansion over the last few years.

While some fibre networks have been installed in most cities, most urban households have no access to high-speed broadband, and access to infrastructure is the primary barrier to achieving broadband connectivity in rural markets. A majority of UK

households can order service offering speeds greater than 30 Mbps. However, there remains a substantial gap of 7 million households with no broadband or mobile internet access, according to a report published by the Communications and Digital Committee of UK. Similarly, in its Spring 2023 update, Ofcom reported approximately 68,000 UK premises don't have an access to a decent broadband service

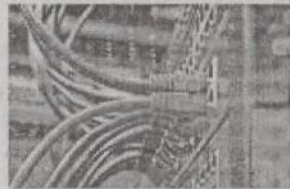

(with speeds below 10Mbps) and almost 435,000 properties can't access decent broadband through a fixed-line service. The UK Government is actively engaged with private players and the digital services ecosystem and have recently launched a £40 million fund to accelerate 5G innovation and to put all UK households in reach of fibre to the premises (FTTP) by 2033 as part of its Project Gigabit.

## HFCL launches IBR fibre cables to supercharge UK's fibre build plans

London, HFCL Limited (HFCL), a leading technology enterprise and integrated next-gen communications product and solution provider, today announced the launch of its revolutionary Intermittently Bonded Ribbon (IBR) Cables in the United Kingdom (UK). As a leading supplier in the UK market, this strategic move is in line with HFCL's global expansion plans and aims to further tap into UK's urban and rural markets, accelerate 5G and FTTP adoption, and meet the growing bandwidth demands.

The basis of the new cables is individual Intermittently Bonded Ribbons, each made up of 12 optical fibres, which are bonded together at specific intervals along their lengths. Unlike traditional flat ribbons, flexible IBRs can bend and con-

form to the space available inside a cable. Groups of IBRs can, therefore, be bundled together into cables that provide twice the fibre packing density of traditional cables in the same vol-

ume. IBR cables enable installation of higher fibre counts in small diameter ducts, especially useful in congested areas with very limited space. One of the significant features of the new cable family is the high productivity mass fusion splicing that enables both faster installation and quick restoration in case of an accidental outage.

Mr. Mahendra Nahata,

Managing Director, HFCL said, "HFCL, one of the leading global manufacturers of optical fibre and optical fibre cable, aims to play a crucial role in deploying high-speed internet connectivity to speed up fiberisation across the UK with the launch of its IBR Cables.

Our uniquely designed IBR cables are perfectly suitable to meet the goals of the UK Government to put all households in reach of fibre to the premises (FTTP) by 2033 and accelerate 5G expansion.

With our already established teams, office and warehousing facility in the UK, we are committed to providing superior solutions around customer problems locally. Thus, enhancing connectivity in high density areas and areas with numerous overlapping networks."

- IBR cable is ideal for use in microducts, especially useful in crowded urban areas in the UK market
- Its high productivity mass fusion splicing feature also enables faster installation, as well as quick restoration in case of an accidental outage

LONDON--(BUSINESS WIRE)-- HFCL Limited (HFCL), a leading technology enterprise and integrated next-gen communications product and solution provider, today announced the launch of its revolutionary Intermittently Bonded Ribbon (IBR) Cables in the United Kingdom (UK). As a leading supplier in the UK market, this strategic move is in line with HFCL's global expansion plans and aims to further tap into UK's urban and rural markets, accelerate 5G and FTTP adoption, and meet the growing bandwidth demands.

The basis of the new cables is individual Intermittently Bonded Ribbons, each made up of 12 optical fibres, which are bonded together at specific intervals along their lengths. Unlike traditional flat ribbons, flexible IBRs can bend and conform to the space available inside a cable. Groups of IBRs can, therefore, be bundled together into cables that provide twice the fibre packing density of traditional cables in the same volume. IBR cables enable installation of higher fibre counts in small diameter ducts, especially useful in congested areas with very limited space. One of the significant features of the new cable family is the high productivity mass fusion splicing that enables both faster installation and quick restoration in case of an accidental outage.

In the UK, both urban and rural communities still face inadequate broadband access despite rapid expansion over the last few years. While some fibre networks have been installed in most cities, most urban households have no access to high-speed broadband, and access to infrastructure is the primary barrier to achieving broadband connectivity in rural markets.

A majority of UK households can order service offering speeds greater than 30 Mbps. However, there remains a substantial gap of 7 million households with no broadband or mobile internet access, according to a report published by the Communications and Digital Committee of UK. Similarly, in its

## HFCL Ltd - Announcement under Regulation 30 (LODR)- Press Release / Media Release

[Download](#) 

[< Back](#)

20 Sep 2023

We are pleased to announce to all our stakeholders that the Company has successfully launched its revolutionary Intermittently Bonded Ribbon (IBR) Cables in the United Kingdom (UK) today. As a leading supplier in the UK market, this strategic initiative aligns with HFCL's global expansion plans and aims to further tap into UK's urban and rural markets. This move will expedite the adoption of 5G and FTTP technologies while meeting the increasing demands for bandwidth in UK. We are enclosing herewith a Press Release in this regard.

### COMPANY

## HFCL launches revolutionary IBR Cables in UK

Sep-20-2023

HFCL has launched revolutionary Intermittently Bonded Ribbon (IBR) Cables in the United Kingdom (UK). As a leading supplier in the UK market, this strategic move is in line with HFCL's global expansion plans and aims to further tap into UK's urban and rural markets, accelerate 5G and FTTP adoption and meet the growing bandwidth demands.

The basis of the new cables is individual Intermittently Bonded Ribbons, each made up of 12 optical fibres, which are bonded together at specific intervals along their lengths. Unlike traditional flat ribbons, flexible IBRs can bend and conform to the space available inside a cable. Groups of IBRs can, therefore, be bundled together into cables that provide twice the fibre packing density of traditional cables in the same volume. IBR cables enable installation of higher fibre counts in small diameter ducts, especially useful in congested areas with very limited space. One of the significant features of the new cable family is the high productivity mass fusion splicing that enables both faster installation and quick restoration in case of an accidental outage.

In the UK, both urban and rural communities still face inadequate broadband access despite rapid expansion over the last few years. While some fibre networks have been installed in most cities, most urban households have no access to high-speed broadband and access to infrastructure is the primary barrier to achieving broadband connectivity in rural markets.

HFCL is a leading telecom infrastructure developer, system integrator and manufacturer of high-end telecom equipment and optical fibre cables, having its own manufacturing facilities at Solan and Goa, and its subsidiary i.e. HTL facilities in Chennai and Hosur.

## HFCL launches revolutionary Intermittently Bonded Ribbon (IBR) fibre cables

Posted On: 2023-09-20

London, Sept. 20 -- HFCL Limited (HFCL), a leading technology enterprise and integrated next-gen communications product and solution provider, on Wednesday announced the launch of its revolutionary Intermittently Bonded Ribbon (IBR) Cables in the United Kingdom (UK).

As a leading supplier in the UK market, this strategic move is in line with HFCL's global expansion plans and aims to further tap into UK's urban and rural markets, accelerate 5G and FTTP adoption, and meet the growing bandwidth demands, according to a media statement.

The basis of the new cables is individual Intermittently Bonded Ribbons, each made up of 12 optical fibres, which are bonded together at specific intervals along their lengths. Unlike traditional flat ribbons,...
